

Features

- 6 or 10 mode multiplexer
- Operation over C-band (1550 nm)
- Low insertion loss and high mode selectivity
- Ultra compact design
- Optimized for commercially available few-mode fibers

General specifications

Description

- Entry-level, standard design for research and development groups
- Based on CAILabs' Multi-Plane Light Conversion* (MPLC) patented technology
- Provides efficient multiplexing of 6 or 10 spatial modes
- Choice of commercially available, step-index or graded-index few-mode fibers manufactured by Prysmian

	PROTEUS-S-6		PROTEUS-S-10	
Parameter	Value (at 20°C)	Typical	Value (at 20°C)	Typical
Number of modes	6		10	
Wavelength of operation	C-band (optimized for 1550 nm)			
Back-to-back insertion loss	< 7 dB	5 dB	< 10 dB	8 dB
Back-to-back cross-talk	< -15 dB	-20 dB	< -12 dB	-18 dB
Signal input fiber type	SMF-28e+ array with LC/PC connectors			
Signal output fiber type	4 LP mode step-index fiber by Prysmian		6 LP mode graded-index fiber by Prysmian	
Package size (mm)	120 x 98 x 38
