OVERVIEW

The cyberSCAN CT 100 is a compact high resolution non-contact profilometer. The main components of the system are a laser or a white light sensor and a x-, y-motion system on a granite platform. Especially the chromatic white light sensors combine high accuracy and high measurement speed. The sensors are available with a resolution down to 3 nm and a measurement range up to 25 mm. The system can scan a maximum area of 150 mm x 150 mm. The proprietary and userfriendly cyberTECHNOLOGIES Software offers sophisticated surface metrology analyses and automated measurement routines.

APPLICATIONS

Typical applications are the analysis and quality control of printing processes, such as thick-film measurement on a variety of substrate materials, volume measurement of paste depots, epoxy-films, dots or other printed and dispensed features. Geometry and position measurement of highly contoured objects like solder bumps, micro-lenses, and MEMS devices, as well as flatness and coplanarity analysis are other popular applications.
