PROMETHEUS

The Prometheus colorimeter offers a unique combination of high speed and accurate colour measurement capabilities packed in a robust package. In comparison to its predecessors, the Prometheus has highly accurate filter characteristics and compared to the hyperion a higher sampling speed and dynamic range.

The Prometheus colorimeter is available with several different optics ranging from 2.1mm spot size to 27mm. A fiber version is also available with several optics, custom optics can be applied on request. Added to the improved filter characteristics the high sensitivity, ultra-low noise electronics and a huge dynamic range make it the ideal device for display measurements especially at low levels.

HIGHLIGHTS

- Highly accurate colour measurement according to human eye (CIE1931)
- Fast colour measurement even at low luminance level
- Flicker luminance (Y) function: 2500 samples/second
- Auto-range function
- Powerful MCU enables internal JEITA flicker calculation
- Mechanical shutter
- USBTMC standard compliant
- Windows, Linux and MAC OSX compatible
- Directly supported in Labview, LabWindows, Visual Studio via VISA library

STANDARDS

The Prometheus is compliant to the USBTMC standard and can be used in combination with external provided USBTMC compliant drivers. Currently it has been tested on Windows, Linux and Apple OSX using NI VISA (www.ni.com/visa) and using the open source drivers on Linux (i686, x86_64 and ARM).
